From passion, from insight, from everyday life

This story began 50 years ago. From passion, from the desire to create, from diligence, from insight, and from everyday life. A product was created that was meant to serve not only humans but also animals.

ProSAVE is a unique preparation, whose molecule in an aqueous solution becomes positively active, effectively destroying pathogens such as bacteria, viruses, and fungi. We created it to surround you with safety in every place and every situation.

How proSAVE works

Innovative approach to disinfection

ProSAVE works on the principle of polarization. Its molecules in an aqueous solution are cationic, which allows them to attract the negatively charged cell membranes of pathogens, such as bacteria, viruses, and fungi. As a result, these membranes rupture, effectively eliminating the threat. Importantly, proSAVE is odorless, free from irritating smells, safe for multicellular organisms, and its use does not damage surfaces.

Application of proSAVE

Wide application across various sectors

Thanks to our research and technology, we can offer products that penetrate even the most hard-to-reach places, eliminating pathogens without harmful health effects. ProSAVE products are effective wherever cleanliness and hygiene at the highest level are essential, from medical offices and hospitals to the public sector and the food and veterinary industries.

Purpose of proSAVE

ProSAVE RTU20 a disinfectant intended for final disinfection of previously washed and rinsed surfaces and equipment, both those in contact with food and those that do not, in the medical field, public facilities, the food industry, households, and for hygienic hand disinfection. It has bactericidal properties, is effective against yeast-like fungi and enveloped viruses.

Medical Sector

Professional Alcohol-Free Disinfection

Safety and effectiveness are fundamental in the medical environment. The proSAVE product line for alcohol-free disinfection has been created with the highest protection in mind, eliminating the risk of unwanted side effects that can be associated with alcohol use.

Available packaging

Trigger Spray
1000 ml

Bottle with dispensing pump
1000 ml

Cap Canister
5000 ml

Alcohol-free formula

Alcohol-free disinfectants from the proSAVE line for the medical sector are safe for delicate surfaces and do not cause dryness or skin irritation of the staff.

Effective disinfection

The alcohol-free disinfectants from the proSAVE line for the medical sector act biocidally on bacteria, viruses, and fungi, ensuring cleanliness and protection at a clinical level.

Wide application

Alcohol-free disinfectants from the proSAVE line for the medical sector have been designed to be easy and convenient to use on various surfaces, including medical equipment, furniture, and areas with high traffic.

Safe for the environment

Alcohol-free disinfectants from the proSAVE line for the medical sector are biodegradable and environmentally friendly, making them an ideal choice for facilities that care about ecology.

Ease of use

Alcohol-free disinfectants from the proSAVE line for the medical sector come in ergonomic packaging that facilitates application, and their fast action allows for a shortened disinfection time between patients.

Application in practice:

Alcohol-free disinfectants from the proSAVE line for the medical sector are ideal for hospitals, clinics, medical centers, and specialist offices, in treatment rooms, preoperative areas, wards, and common areas.

Choosing proSAVE RTU20 alcohol-free disinfectant for medical surfaces means opting for effectiveness, safety, and convenience. The product has been tested according to European standards (EN 14476, EN 13727, EN 13624, EN 1276, EN 1650), ensuring the highest quality.

Public Sector

Professional Alcohol-Free Disinfection

The alcohol-free surface disinfection line from proSAVE, intended for the public sector, is a method of surface and hand disinfection that does not contain alcohol. It is particularly useful in the public sector, where safety and effectiveness are key, and alcohol-based disinfectants may not be an ideal solution due to their irritating and flammable properties.

Available packaging

Trigger Spray
1000 ml

Cap Canister
5000 ml

Safety

The lack of alcohol means that these agents are less prone to accidental ignition and do not emit vapors that can be unpleasant or toxic.

Gentleness on the skin

Alcohol-free disinfectants are usually gentler on the skin, which is important with frequent use, minimizing the risk of irritation or dryness.

Broader spectrum of users

Since they are less irritating, they can be safely used by children and people with sensitive skin, which is crucial in public places such as schools or kindergarten.

Effectiveness

The alcohol-free disinfection line for the public sector is designed to work effectively as a biocidal agent, combating a wide range of microorganisms, including viruses, bacteria, and fungi.

No harmful vapors

Ideal for enclosed spaces and areas with limited ventilation, where alcohol vapors could be problematic.

Application in practice:

Alcohol-free disinfection is a practical and safe solution for places where large groups of people require maintaining high hygiene standards. It offers effective protection against the spread of diseases without the risks posed by alcohol-based agents.

- Educational institutions: schools, universities, nurseries
- Public transport: buses, trains, airports
- Healthcare facilities: clinics, hospitals (see also the proSAVE line for the medical sector)
- Government and public institutions: offices, libraries, cultural centers
- Sports and recreational facilities: gyms, swimming pools

Food Sector

Professional Alcohol-Free Disinfection

The proSAVE alcohol-free disinfection product line for the food sector is a key element in ensuring safety and hygiene in food production and processing. Alcohol-free disinfection products are particularly useful where alcohol could affect the taste or safety of the final product, as well as in places where maintaining low levels of vapors is necessary.

Available packaging

Cap
Canister
5000 ml

Tank
1000 L

Safer for health

Alcohol-free disinfectants are usually less irritating to the skin, respiratory tract, or eyes compared to their alcohol-based counterparts. For food sector workers, this means a lower risk of irritation, allergies, or other health problems.

Quick action

Ready-to-use products eliminate the need for dilution or mixing, which shortens disinfection time. Simply apply the product to the surface, which is convenient and quick.

Effectiveness

Modern alcohol-free disinfectants often have a broad spectrum of action against bacteria, viruses, and fungi, ensuring high effectiveness in maintaining hygiene.

No residues or odors

Unlike alcohol, alcohol-free products often do not leave behind odors or residues, which is advantageous in places where food is stored.

Protection of equipment and surfaces

Alcohol can eventually damage certain surfaces, equipment, or seals. Alcohol-free agents are generally gentler, which helps extend the lifespan of devices and surfaces.

Application in practice:

Flexibility of use: These products can be applied to various surfaces and equipment that come into contact with food, which is crucial in the food industry where cleanliness and safety are top priorities.

1. Meat processing: work surfaces, grinding machines, slicers.
2. Dairy production: milk storage tanks, pipelines, milking machines.
3. Bakeries and confectioneries: work tables, mixers, baking molds.
4. Fruit and vegetable industry: production lines, conveyor belts, cutting machines.
5. Fish and seafood processing: cold rooms, work counters, fish gutting machines.
6. Beverage production: bottling lines, fermentation tanks, pipelines.
7. Sweets and snacks production: packaging lines, crushers, coating machines.
8. Food wholesalers: cold rooms, warehouses, loading areas.

Hygienic Hand Disinfection

Professional Alcohol-Free Disinfection

The alcohol-free proSAVE formula is a gentle yet effective hand disinfectant, created specifically for safe and hygienic protection without the use of alcohol.

Available packaging

Bottle with dispensing pump
1000 ml

Refill bottle
1000 ml

Cap Canister
5000 ml

Less irritating to the skin

It is gentler and less likely to cause drying or irritation, making it ideal for people with sensitive skin.

Safety

It is safer to use for children, as it does not pose a risk of alcohol poisoning in case of accidental ingestion.

Quick action

One of the most important advantages of proSAVE hand disinfection is its fast action. After just 30 seconds, the product effectively eliminates bacteria, viruses, and fungi, ensuring the highest level of hygiene.

No intense smell

It has a mild scent, which is often less irritating for users compared to the smell of alcohol.

Non-flammability

It is non-flammable, making it a safer option in places where there is a fire risk.

Certificates and approvals

Registered with the Office for Registration of Medicinal Products, Medical Devices, and Biocidal Products.

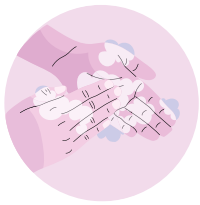

Application in practice:

Universal application: It can be used in places where the use of alcohol-based products is restricted or inadvisable.

The alcohol-free formula makes the product safe even for frequent use, without causing irritation or skin dryness, making it an ideal solution for daily use in medical facilities, public places, and locations where hygiene is a priority.

Delicate Hand Foam

Professional Alcohol-Free Disinfection

The gentle alcohol-free hand disinfecting foam is a product designed for hygienic hand disinfection without the use of alcohol, making it ideal for people with sensitive skin or allergies. This foam effectively fights bacteria, viruses, and fungi, while caring for the skin, leaving it soft and moisturized.

Available packaging

Bottle with foaming tip
100 ml

Bottle with foaming tip
200 ml

Easy application

The foam spreads easily on the skin, ensuring thorough coverage of the entire hands without the need to use a large amount of product.

Fast absorption

The foam's consistency allows it to be absorbed quickly, meaning that hands do not remain sticky or wet for long.

Effectiveness

Despite the lack of alcohol, the foam is effective in eliminating many bacteria and viruses thanks to specially developed ingredients, making it suitable for people in environments where heightened hygiene is crucial.

Pleasant sensation

Many users appreciate the gentle feeling of the foam on the skin and the lack of an irritating alcohol smell, which can be dominant in some liquid disinfectants.

Alcohol-free

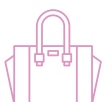

The absence of alcohol in the composition means that the foam does not cause drying, burning, or skin irritation. This is important for seniors, who often have more delicate and thinner skin, as well as for children, who may have more sensitive skin.

Application in practice:

The foam is easy to spread and absorbs quickly, which is beneficial for children and older adults, who may have difficulty using other forms of disinfectants, such as gels or liquids.

Increased safety: For individuals in environments exposed to pathogens, such as hospitals, schools, or care homes, regular and easy-to-perform hand disinfection is key to preventing the spread of diseases.

Mobility: Small and lightweight foam packaging is convenient to carry in a handbag, backpack, or pocket, making it easy to have it always on hand.
